Background	p38 MAP kinase (MAPK) is the mammalian orthologue of the yeast HOG kinase that participates in a signaling cascade controlling cellular responses to cytokines and stress. Isoforms p38 α , β , γ and δ have been identified. p38 MAPK is activated by a variety of cellular stresses including osmotic shock, inflammatory cytokines, lipopolysaccharide (LPS), UV light, and growth factors.

Selected Validation Data

Immunohistochemical analysis of paraffin-embedded Human Lung Carcinoma Tissue using P38 Mouse mAb diluted at 1:200.
